On-Site Assembly & Testing

• **First step presumably will be:**
  Assembly of the 6 sub-assemblies

• **Next step:**
  To what extent can the full shield be assembled on-site?
  - Space issues?
  - Crane issues?

• **Testing scenarios:**
  Mapping of partial assembly
  - Lower/Upper Body + Nosecone + Endcaps + Tophat
  How to resolve if measured residual fields are larger than projected?

• **Practical issues:** Access, Space for equipment setup, Timeline
