

The Beam Profile Analysis

Latiful Kabir

The Algorithm:

1. No background subtraction this time.
2. M4 intensity is normalized by M1 intensity.
3. Centroid is calculated according to:

$$\bar{y} = \frac{\sum y_i A_i}{\sum A_i} =$$

$$\bar{x} = \frac{\sum x_i A_i}{\sum A_i} =$$

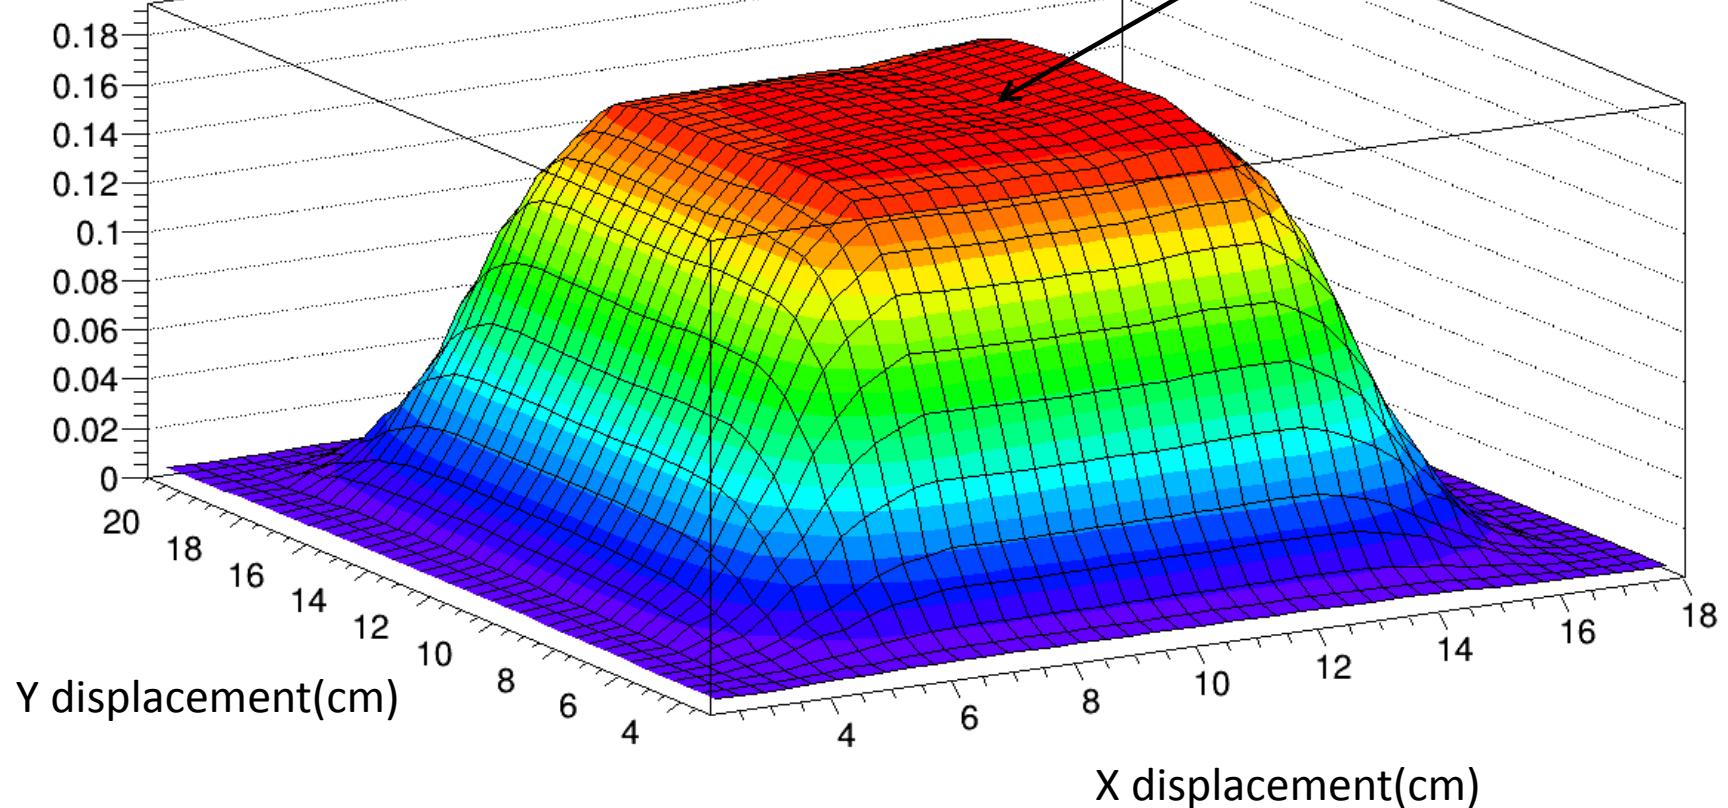

Upstream Beam

17x19 Grid with 1cm separation, No background subtraction, beam normalized

Graph2D Surface Plot

Centroid(10.0413,12.0481)

Intensity

TGraph2D Surface Plot

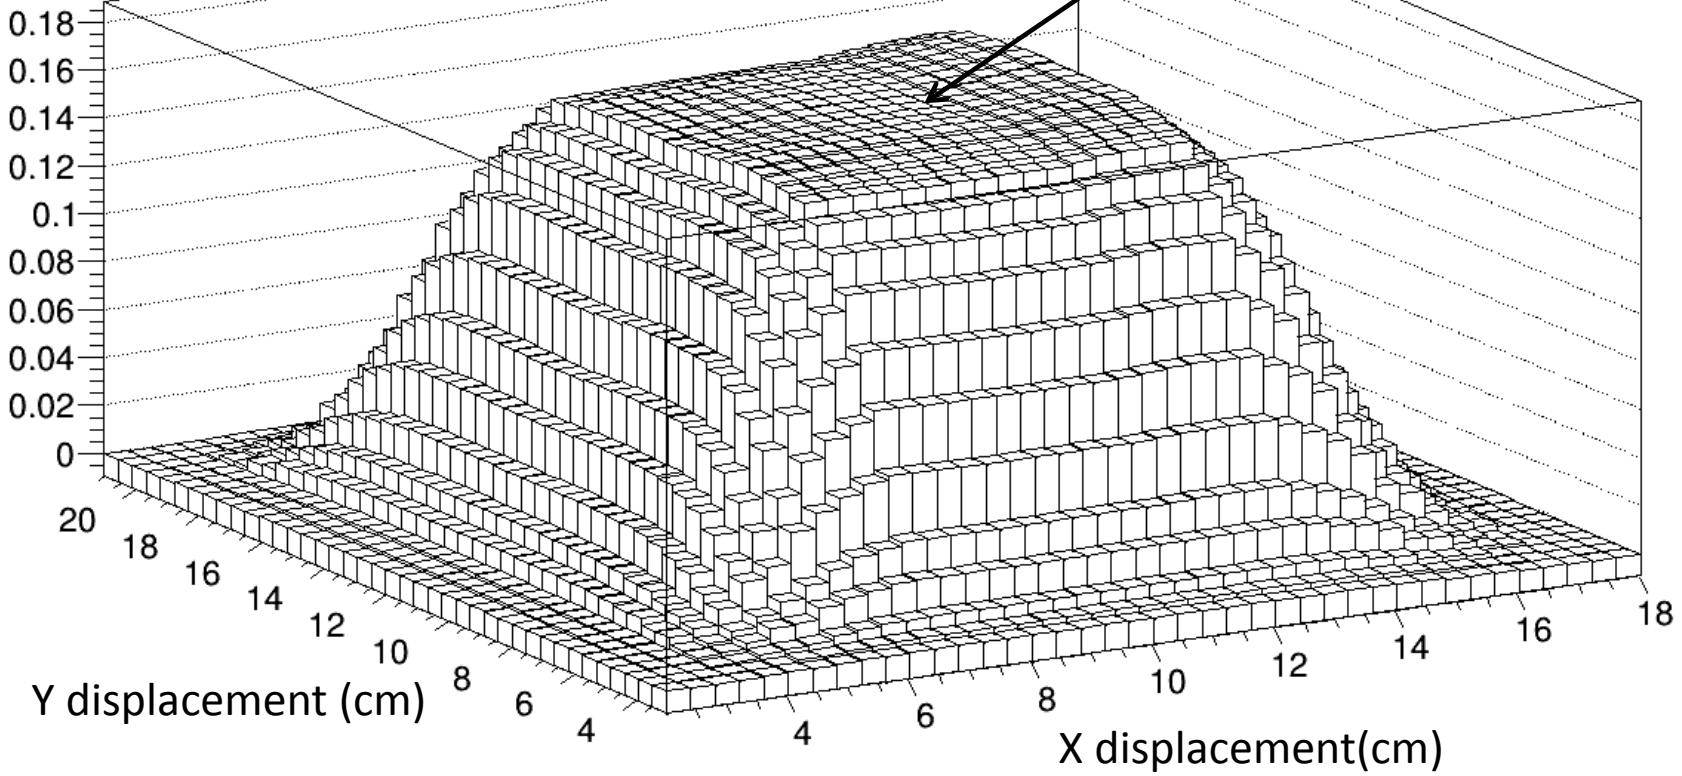

Upstream Beam

17x19 Grid with 1cm separation, No background subtraction, beam normalized (Lego view)

Graph2D Surface Plot

Centroid(10.0413,12.0481)

Intensity

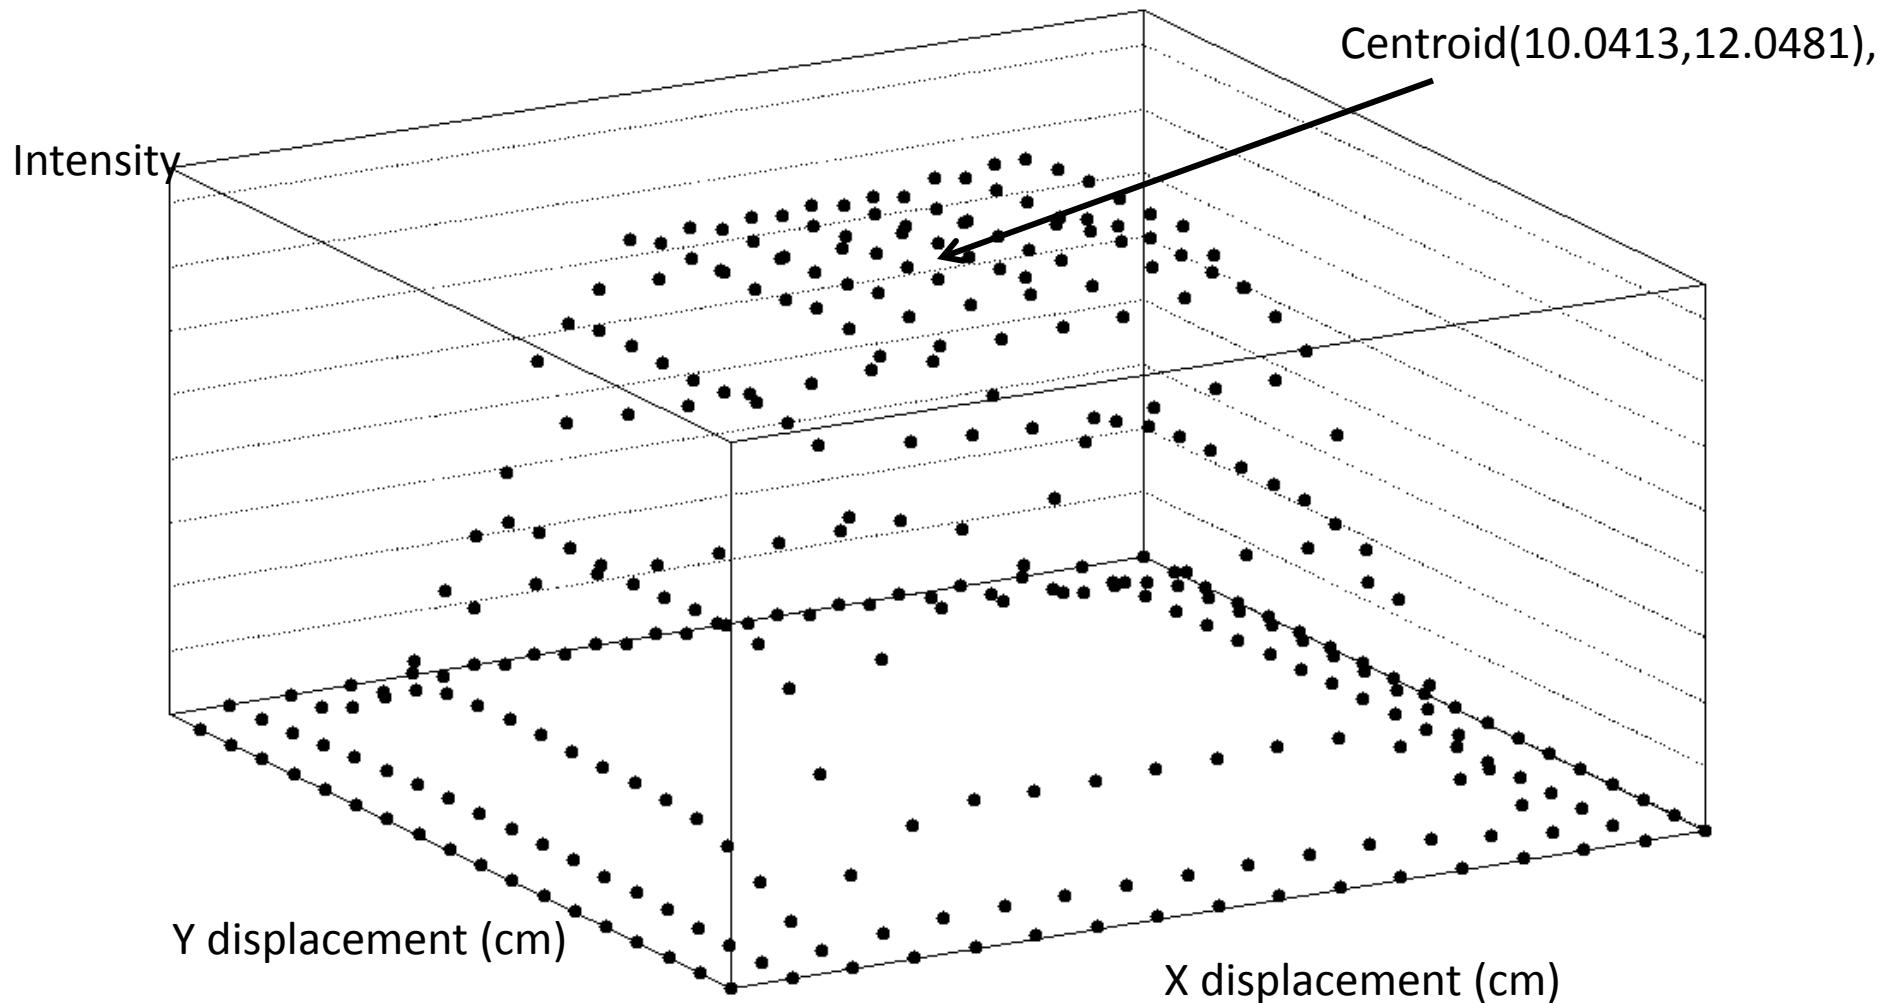

Upstream Beam

17x19 Grid with 1cm Separation, no background subtraction and normalized by M1

Graph2D

Surface Plot

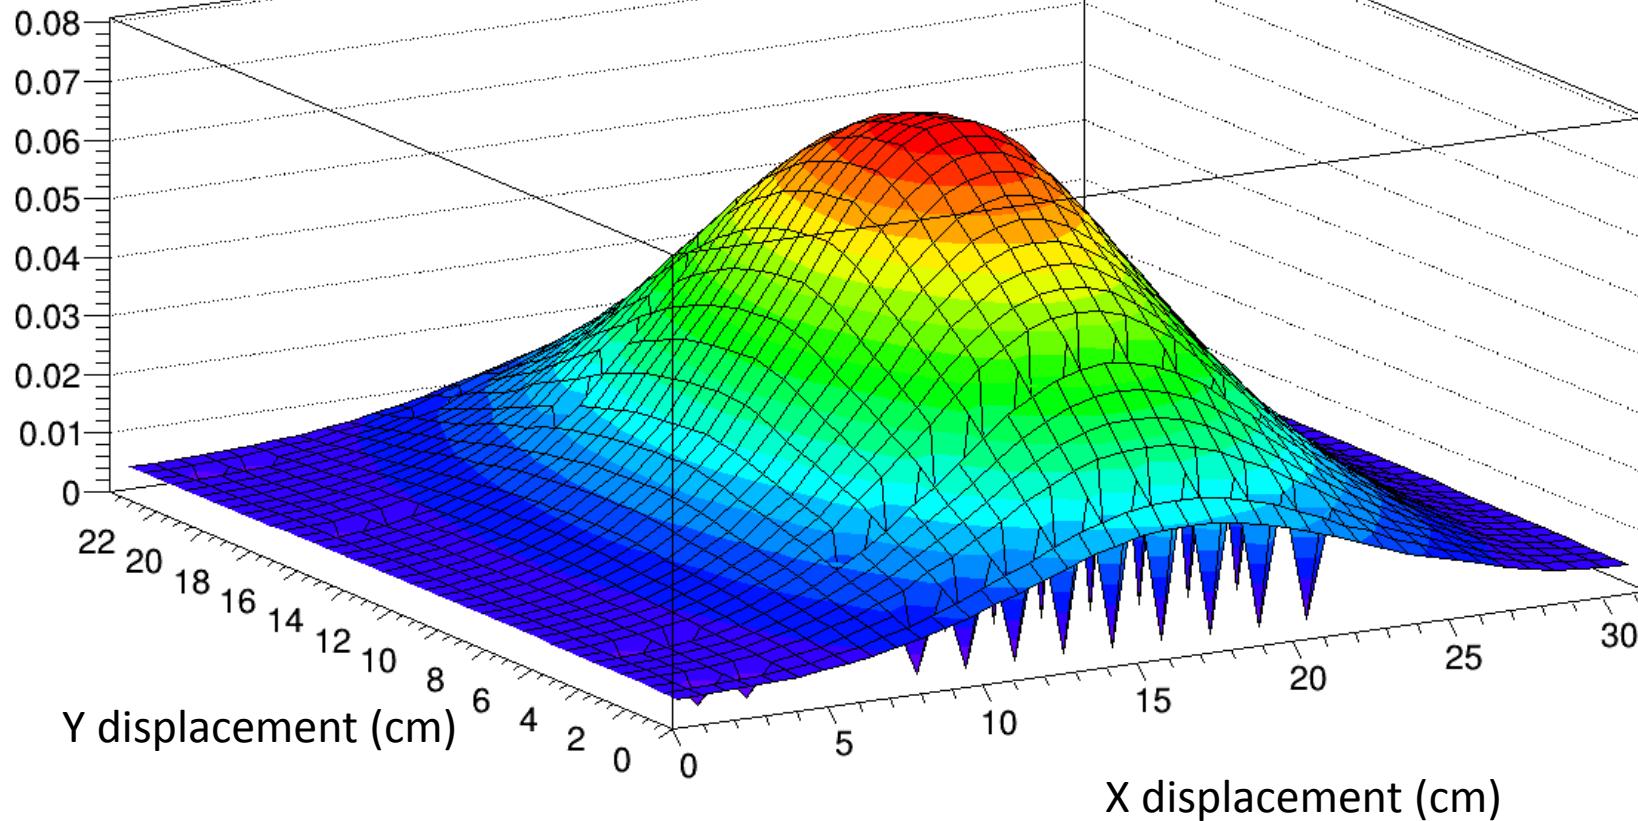

Downstream Beam

22x17 Grid (1.5 cm spacing) :Beam normalized ,No background Subtraction

Graph2D

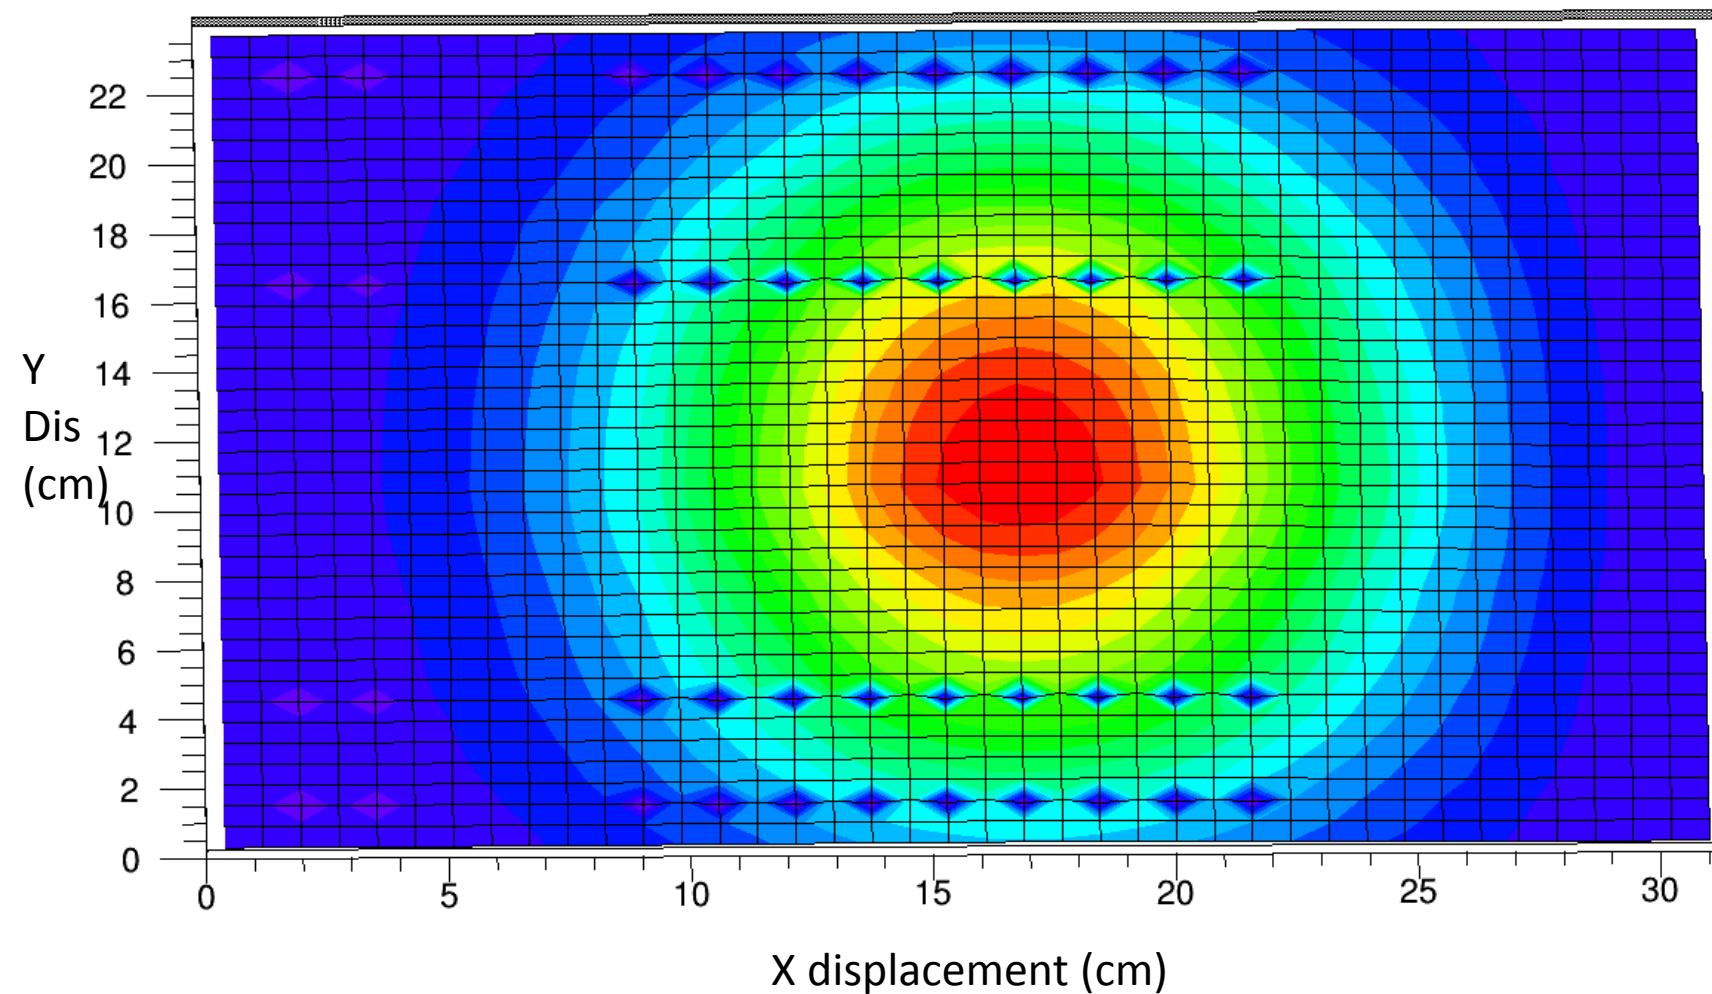

Intensity

Downstream Beam

22x17 Grid (1.5 cm spacing) :Beam normalized ,No background Subtraction

Graph2D

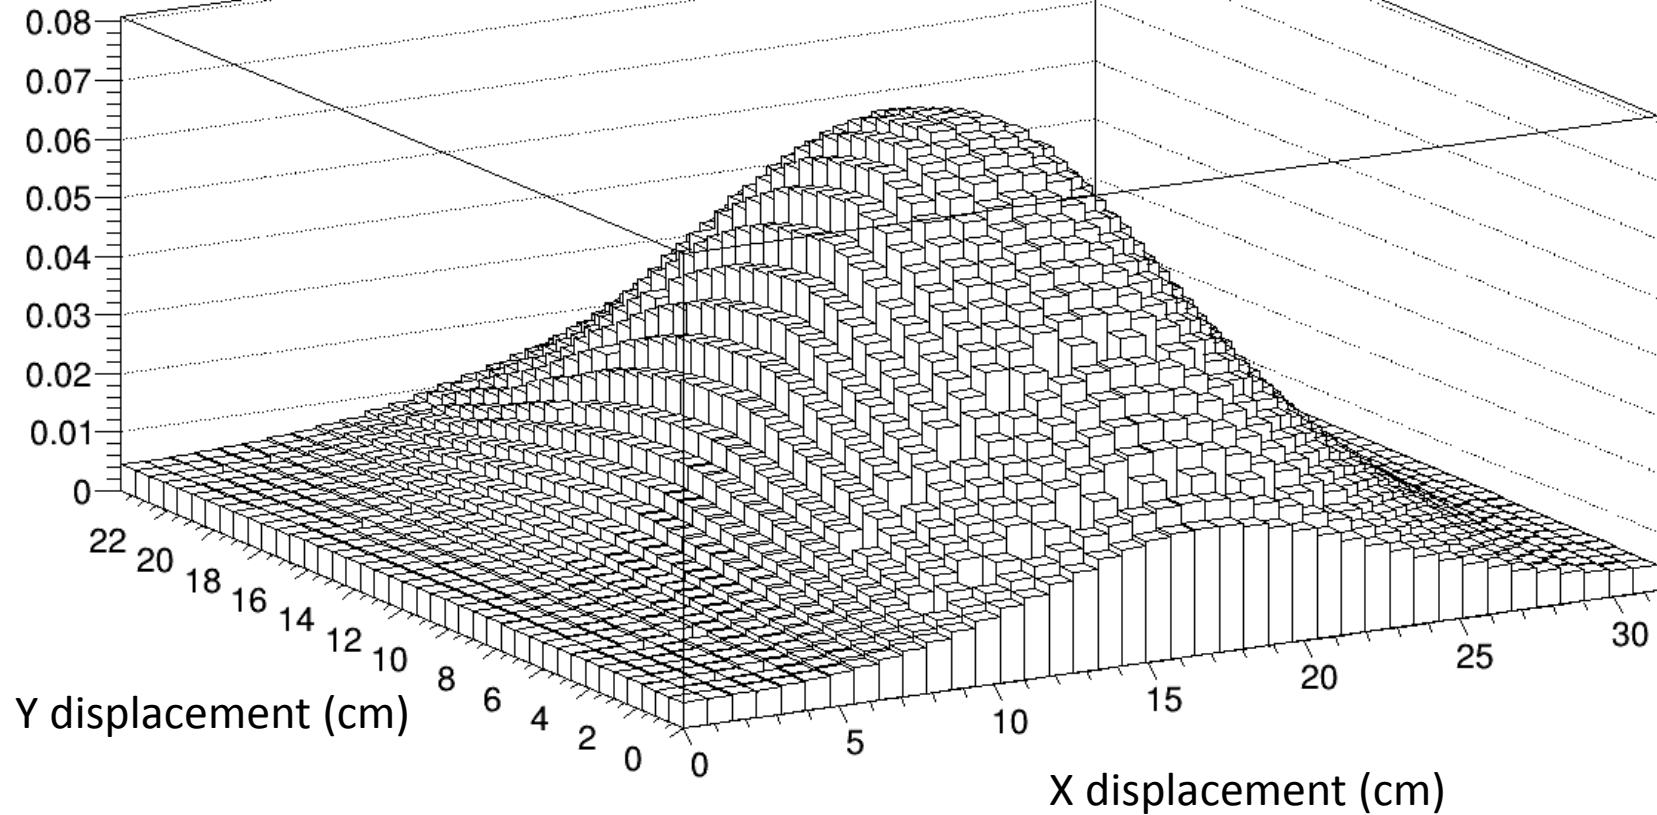

Downstream Beam

22x17 Grid (1.5 cm spacing) :Beam normalized ,No background Subtraction(Lego view)

Graph2D

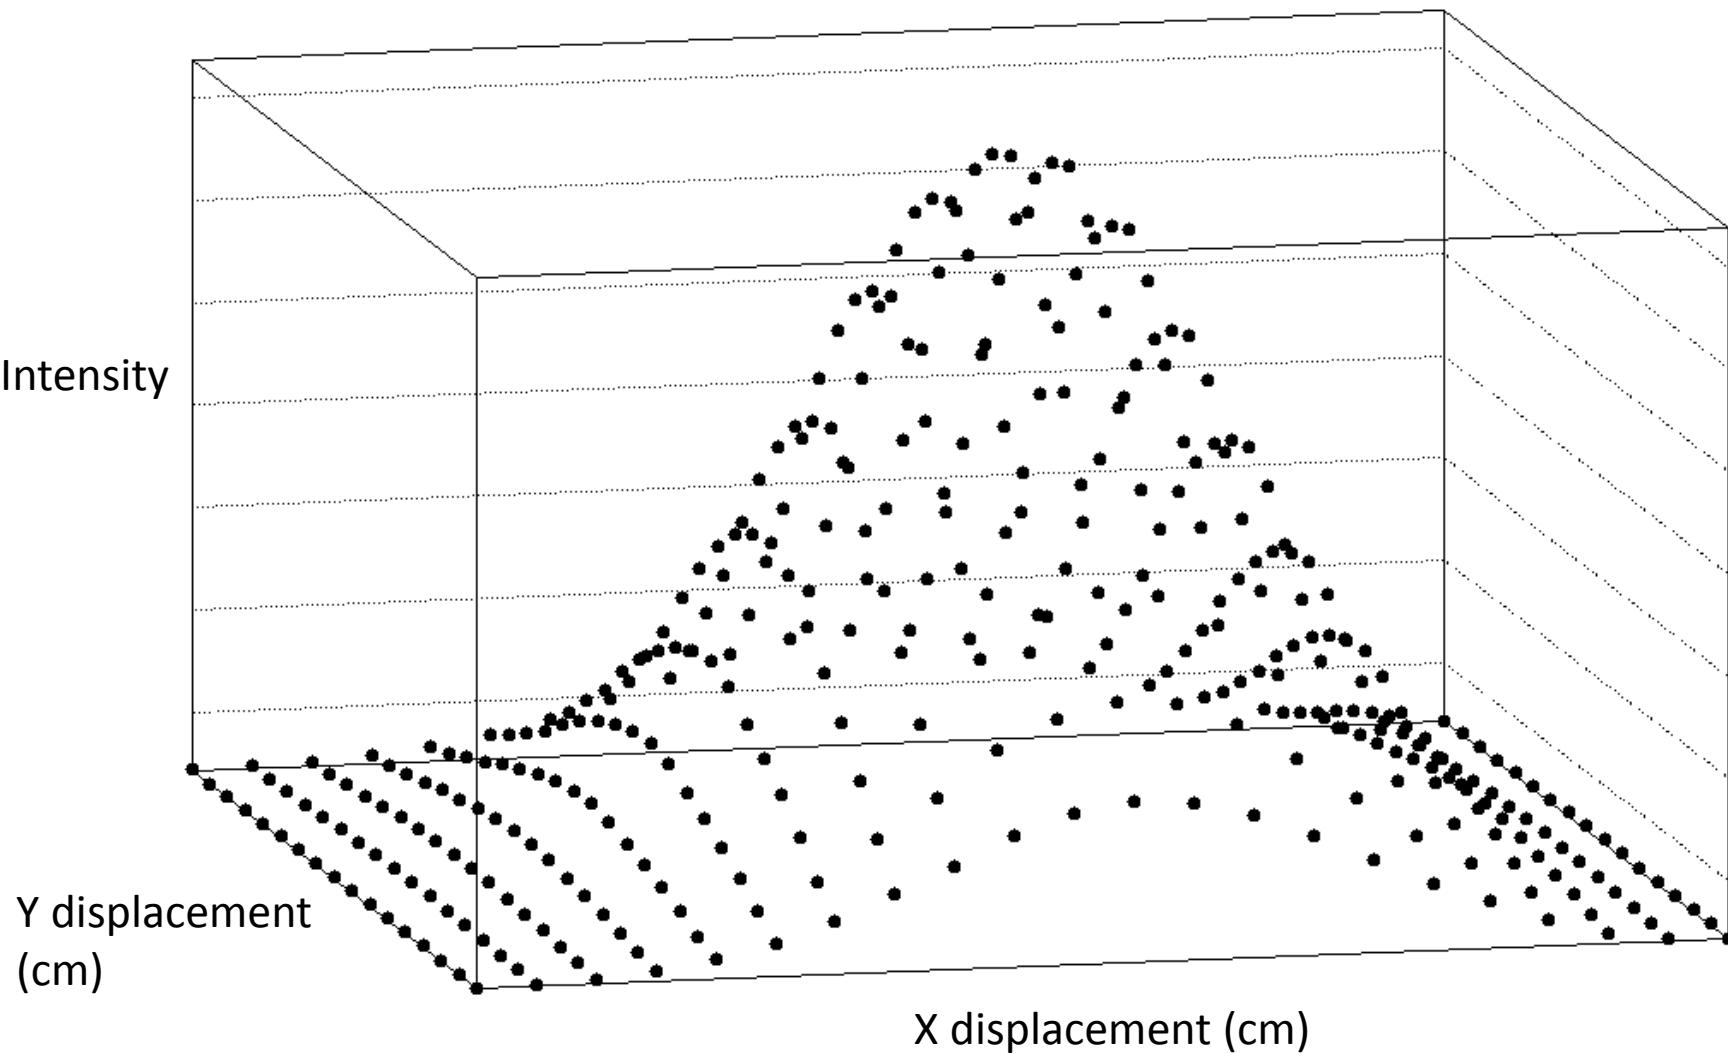

Intensity

Downstream Beam

22x17 Grid (1.5 cm spacing) :Beam normalized ,No background Subtraction

Graph2D

Result:

Beam centroid (Upstream): X=10.0413 cm Y=12.0481 cm

Beam centroid (Downstream): X=16.6353 cm Y=11.6274 cm

Distances are from home position.
